AUTOMOBILES

Rambler

The hand that steers also controls the power

The Rambler throttle is opened or closed by the fingers of the hand that rests on the steering wheel.

Every forward movement of the car, from top speed to a complete stop, can be regulated by this means alone.

This simplicity of control secures positive safety for every Rambler owner.

This feature is only *one* of the many points of Rambler superiority. The rest will be mailed you on request.

Surrey Type One, illustrated above (without top), \$1350 complete with lamps, tools, etc. Cape top, \$125 extra. Other models \$750, \$850, \$2000, \$3000.
