

The worm gear drive of Pierce-Arrow Trucks delivers more of the generated power to the rear wheels than is possible by any other means, because it is the most *direct* and *efficient* drive—demonstrated for ten years in England—and proven in this country for over two years in every class of light and heavy service in which Pierce-Arrow worm driven trucks have been operated.

The worm wheel and worm shaft, generally known as worm gear construction, employed in the Pierce-Arrow Truck, are warranted to fulfill their functions for one year from date of shipment under normal service.
