**250-350-375-400 TURBO-HYDRAMATIC**

**4.003 TURBO-HYDRAMATIC (250, 350, 375, 400)**

*The Turbo Hydra-Matic Section of this catalogue includes two types of three-speed automatic transmission, the T.H. 350 and the T.H. 400.*

*To Identify the Transmission use the following:*

*T.H. 350— The carburetor to transmission throttle control is CABLE ACTIVATED.*

*The cable runs from the accelerator control lever to the RIGHT side of the transmission.*

*T.H. 400— The carburetor to transmission throttle control is ELECTRICALLY ACTIVATED.*

*The cable runs from the switch at the carburetor to the LEFT side of the transmission.*

## BRAKES—REAR AXLE AND DRIVE

The axles for Chevrolet will be built by Chevrolet Buffalo, Chevrolet Gear and Axle, Buick, Oldsmobile and McKinnon. Divisional Manufacturer code letters will be metal stamped on the axle tube adjacent to the carrier for field identification. (See Example). Metal stamp on left rear axle tube on rear side, letters and numerals 3/16" high, 3" outboard of carrier.

### FIELD IDENTIFICATION

### MANUFACTURER IDENTITY

- B - Buick
- O - OLDSMOBILE
- P - PONTIAC
- G - CHEVROLET GEAR AND AXLE
- C - CHEVROLET BUFFALO
- K - GM OF CANADA, ST. CATHARINES
- M - GM OF CANADA

MANUFACTURERS IDENTIFICATION WILL APPEAR IN THE DESCRIPTION COLUMN.

### 5.544 SHAFT— UNIT, Rear Propeller (Shaft attaches to rear axle)

NOTE: The 1971 passenger car constant velocity design production propshafts for all models (except Police) are not serviced. The service replacement propshaft is identical to the production version with the exception that the slip yoke has been removed. The two U-joint bearing assemblies at this location are then held together using two clips with a special retaining strap. These parts are to be discarded when assembling the new propshaft for installation. Two snap rings part number 1456507 must be used to retain the bearing assemblies in the slip yoke.

Do not use the parts shipped with the service propshaft.

NOTE: See Dealer Price Schedule for applicable prices.

### 5.803 WHEEL, Front or Rear

*This section contains Model Usage and Prices for Passenger, Chevy II, Chevelle and Camaro wheels for Wheel size. Tire size and other added description, see the following charts.*

*These two sections should be used in conjunction with one another to determine the correct wheel.*

#### WHEEL RIMS

**6 STUD  
STAMPED DISC WHEEL**

#### ONE PIECE

One-piece rims: 5.25" or larger rims have a 15° taper bead seat, and are used for tubeless tires. Smaller rims have a 5° taper bead seat, and are used for both tubeless and tube tires.

**NOTE:** Offset is determined by measuring the distance from the centerline of the rim to the inner side of the wheel disc.

## 1969 COIL SPRINGS

A new system for release of front and rear coil springs will be used for the 1969 A, B, F and X cars. The assembly plants will use a computer to determine the correct spring based on the RPO equipment on the dealer order. It will also be put on an engineering drawing to Maintain engineering records.

Determination of the correct spring by dealer personnel will be as follows:

1. If the identification tag is still on the spring, Table A will give the part number.
2. If the identification tag is not available, it will be necessary to add the weight for all the RPO equipment on the vehicle. This is shown on Table A. (Only RPO's with 5 lbs. or more are given.)
3. After the extra weight of the vehicle is determined, Table C shows the identification letters of the required spring. These letters are used with Table B to determine the part number.

Example:

A 13646 Concours 4 Door Station Wagon with dual action tail gate is equipped with the following:

Weight to add

<u>Front</u>	<u>Rear</u>	<u>RPO</u>	
196	46	L35	V8 Engine - 396 Cu. In. - 325 HP
23	9	M40	3-Speed Automatic Transmission
* -2	7	A33	Electric Tail Gate Window
30	0	N40	Power Steering
2	14	V55	Luggage Carrier
<u>Total</u> 249	<u>76</u>		

\*NOTE: Some options have negative value and must be subtracted instead of added.

1. The weights were obtained from Table B.
2. Table C for this model shows the spring requirement.  
 Standard Springs - front - 249 # requires spring "GO"  
   rear - All use spring "BB"  
 Heavy Duty Springs - front - 249 # requires spring "GW"  
   rear - All use spring "BG"
3. Table A would then be used to convert to part numbers and the customers requirements would be as follows:

	<u>Front</u>	<u>Rear</u>
Standard Springs	(GO)3952812	(BB)3949015
Heavy Duty Springs	(GW)3952818	(BG)3949006

The use of this system will present two additional advantages. Customer request of upgrading springs due to trunk loads, etc. can be easily accomplished. If there is a question of improper springs installed on the car, it can be easily checked.

## FRAME—SPRINGS—BUMPER

Follow the three steps below to utilize the 1972 spring charts.

1. Select the model desired with the base spring weight on Chart "A".
2. Then select options accordingly shown on Chart "B" and add that weight to the base spring weight.
3. Once accumulated weight has been determined refer to chart "C" and select correct spring.

## 1969 SPRING CHART

A new system for release of front and rear coil springs will be used for the 1969 A, B, F and X cars. The assembly plants will use a computer to determine the correct spring based on the RPO equipment on the dealer order.

Determination of the correct spring by dealer personnel will be as follows:

1. If the identification tag is still on the spring, Table B will give the part number.
2. If the identification tag is not available, it will be necessary to add the weight for all the RPO equipment on the vehicle. This is shown on Table A. (Only RPO's with 5 lbs. or more are given.)
3. After the extra weight of the vehicle is determined, Table C shows the identification letters of the required spring. These letters are used with Table A to determine the part number.

Example:

A 13646 Concours 4 Door Station Wagon with dual action tail gate is equipped with the following:

Weight to add

<u>Front</u>	<u>Rear</u>	<u>RPO</u>	
196	46	L35	V8 Engine - 396 Cu. In. - 325 H.P.
23	9	M40	3-Speed Automatic Transmission
* -2	7	A33	Electric Tail Gate Window
30	0	N40	Power Steering
<u>2</u>	<u>14</u>	V55	Luggage Carrier
Total 249	76		

\*NOTE: Some options have negative value and must be subtracted instead of added.

1. The weights were obtained from Table B.
2. Table C for this model shows the spring requirement.  
 Standard Springs - front - 249 # requires spring "GO"  
                           rear - All use spring "BB"  
 Heavy Duty Springs - front - 249 # requires spring "GW"  
                           rear - All use spring
3. Table A would then be used to convert to part numbers and the customers requirements would be as follows:

	Front	Rear
Standard Springs	(GO)3952812	(BB)3949015
Heavy Duty Springs	(GW)3952818	(BB)3949006

The use of this system will present two additional advantages. Customer request of upgrading springs due to trunk loads, etc. can be easily accomplished. If there is a question of improper springs installed on the car, it can be easily checked.

*Follow the three steps below to utilize the 1973 spring charts.*

1. Select the model desired with the base spring weight on Chart "A".
2. Then select options accordingly shown on Chart "B" and add that weight to the base spring weight.
3. When accumulated weight has been determined refer to chart "C" and select correct spring.
