# INTRODUCTION

This Parts Catalog has been compiled for the purpose of locating, identifying, and ordering replacement parts. All data and specifications contained in this publication are based on the latest product information available at the time of printing. General Motors Parts Division reserves the right to make changes at any time without notice in data, price, specifications, materials, material, and model. The "List Prices" shown are suggested prices only for sales to consumers.

Replacement parts are listed in this catalog under 16 major groups, as shown on the content page. Individual parts are assigned a Prime Group number, the first numeral of the group identifies the main unit it is affiliated with, and following the decimal is the Sub-Group number under which all parts of the same name and function are listed. For example, Group 0.519 Camshaft. The "0" denotes that it is an Engine Part, "519" the sub-group where all Engine Camshafts are listed. Related parts may also be found in the same group. Within each group, parts are listed by model year, vehicle series, part number, number used per vehicle or R.H.-L.H. designation, suggested list price, part name and description.

Parts may be used in different locations on the car requiring the listing of the part number in more than one group. When this "Cross Referencing" occurs, the prime group is shown in brackets i.e. (1.850) in the description column.

To locate a listing for a part, determine the model vehicle and refer to the group number identifying it, which may be determined by using any of the following methods.

- A. When the name of the part is known, consult the ALPHABETICAL INDEX, which lists parts by noun name and Group Number where part is listed.
- B. Reference may be made to the ILLUSTRATION CATALOG, where Group Numbers, noun names or part numbers are shown.
- C. When a part number is known and model application or a similar part is required, consult the DEALER PRICE SCHEDULE for the Group Number to locate the part in the Parts Catalog.

Parts having application or used with optional equipment are identified by Option Number or abbreviation of option. Familiarity with Option Numbers will assist in determining correct part required.

Complete identification for models and options listed in this catalog will be found preceding the alphabetical index.

Service part numbers are assigned to individual parts that make up an assembly used in the production of models. Certain items may not be listed, such as short tubing parts or fuel lines that can be made up by dealers from bulk material or attaching parts may be included in packages with the major assembly and not listed separately.

Right Hand and Left Hand parts are so designated from the driver's position when seated in the car.

# 1965-67 CHEVROLET PROTECT-O-PLATE

The Chevrolet Protect-O-Plate furnished with all vehicles is imprinted at the plant with identifying information covering the majority of standard and RPO equipment. The exact type of engine, transmission, and rear axle with which a vehicle is equipped may be obtained from the plate, as well as exterior color, month of vehicle production and basic vehicle identification. All passenger cars have interior trim information and all passenger models except Corvette include information on major extra cost RPO equipment.

Information is stamped on the plate in two forms;

1. Production identification numbers, such as engine production code number.
2. RPO numbers which are coded with a single digit (passenger except Corvette).

The type of information available on the plate furnished with a given vehicle is shown in the following chart.

### Exterior Colors

All Passenger models will have RPO letter designation stamped in this location. On two tone combinations, the first letter indicates the lower color, second letter the upper color. See Paint Combination Chart in supplementary section of catalog.

## LOCATION C

### Passenger Car Identification Number Explanation

A five digit numbering system will be used on all 1967-69 passenger cars. The basic number groups are:

10000 Series - Corvair	12000 Series - Camaro	15000 Series - Chevrolet	19000 Series - Corvette
11000 Series - Chevy II	13000 Series - Chevelle	16000 Series - Chevrolet	

The first two digits denote the vehicle series. The third indicates base engine equipment, and the two remaining numbers identify the body style. When the third digit is odd (1, 3, 5, 7), the base engine is an L-4 or L-6. When the third number is even (2, 4, 6, 8), the base engine is a V-8.

The complete serial number consists of the above model identification, year of manufacture, plant designation, and sequence number.

EXAMPLE: 164397F100500

(16439)	(7)	(F)	(100500)
Impala V-8 4-Dr. Sport Sedan	1967 Model	Flint Built	500th 1967 Chevrolet built at Flint

Each passenger vehicle will have a build sequence number.

### Passenger Car Identification Number Explanation

A five digit numbering system will be used on all 1967-68 passenger cars. The basic number groups are:

10000 Series - Corvair	12000 Series - Camaro	15000 Series - Chevrolet	19000 Series - Corvette
11000 Series - Chevy II	13000 Series - Chevelle	16000 Series - Chevrolet	

The first two digits denote the vehicle series. The third indicates base engine equipment, and the two remaining numbers identify the body style. When the third digit is odd (1, 3, 5, 7), the base engine is an L-4 or L-6. When the third number is even (2, 4, 6, 8), the base engine is a V-8.

The complete serial number consists of the above model identification, year of manufacture, plant designation, and sequence number.

Example: 164399F000500

(16439)	(9)	(F)	(000500)
Impala V-8 4-Door Sport Sedan	1969 Model	Flint Built	500th 1969 Chevrolet Built at Flint

Passenger vehicle build sequence numbers start as follows at each assembly plant location.

Corvair	700001	Camaro	500001	Chevrolet	000001
Chevy Nova	300001	Chevelle	300001	Corvette	700001

Engine plants, will stamp a source, production date and engine suffix on all engines.

Assembly plants will stamp assembly plant designation and continuous sequence number portion of the vehicle identification number on all 307, 327, 350, 396, and 427 cubic inch engines, except Corvette. Since all Corvettes are built at St. Louis, the assembly plant designation is not required. Here, only the continuous sequence number will be used.

### Engine Production Code Number Locations

PASSENGER 4 or 6-Cyl. - Stamped on pad right side of engine at rear of distributor.

CORVAIR - Stamped on top of engine block immediately forward of generator - oil filter adapter.

PASSENGER V-8 - Stamped on pad immediately forward of right hand cylinder head.

**LAMP SOCKET REPLACEMENT**

*It is necessary to carefully check the parts catalogs for correct model application when replacing lamp socket assemblies. If incorrect sockets are used for replacement, the bulb filament will be in the wrong location with respect to the lens and/or reflector. As a result, the lamp may fail to meet the required lighting standards.*

**LAMP SOCKET REPLACEMENT**

*It is necessary to carefully check the parts catalogs for correct model application when replacing lamp socket assemblies. If incorrect sockets are used for replacement, the bulb filament will be in the wrong location with respect to the lens and/or reflector. As a result, the lamp may fail to meet the required lighting standards.*
