

# Before You Decide Take an Airflyte Ride in the World's Most Modern Car

Photography by Sarra

BEFORE YOU PUT A PENNY DOWN ON ANOTHER CAR, drive a new Nash Airflyte—the car built the new modern way, with Airflyte Construction.

You'll discover amazing differences—a complete new feeling of security . . . new riding comfort . . . a new sense of restful quiet, free of the usual wind-roar.

You'll see seats that recline, air that is conditioned by the Weather Eye, even Twin Beds.

See why Nash has a postwar sales gain five times as great as the average of the industry. Get the best car for the years ahead. Before you decide, take an Airflyte ride—in the world's most modern car.

**Thrill** to true aerodynamic design that hushes wind noise . . . skyrockets economy—over 25 miles a gallon at average highway speed in the Statesman.

**Loads more room!** This luggage compartment is twice as roomy as some. In the huge passenger compartment the seats can become Twin Beds at night.

**Their turn!** Everyone wants to try the Airflyte Airliner Reclining Seat. At lever touch, it eases back as far as you like. Relax, float off to sleep.

**Winter's fun** for you're always snug with the Weather Eye Conditioned Air System—air filtered, warmed, pressurized like an Airliner's lounge.

**With double-rigid** Airflyte Construction, body-and-frame are welded into one single solid unit that stays new for years longer. Rattleproof, squeak-free.

**You're driving** a record-breaker in the Ambassador. It officially averaged 95.3 m.p.h. for 712 miles. You get more miles a gallon on regular gas.
