

## Presenting America's slowest fastback.

There are some new cars around with very streamlined roofs.

But they are not Volkswagens.

They are called fastbacks, and some of them are named after fish.

You can tell them from Volkswagens because a VW won't go over 72 mph. (Even though the speedometer shows a

wildly optimistic top speed of 90.)

So you can easily break almost any speed law in the country in a VW.

And you can also cruise right past gas stations, repair shops and tire stores.

The VW engine may not be the fastest, but it's among the most advanced. It's made of magnesium alloy (one step better than

aluminum). And it's so well machined you may never add oil between changes.

The VW engine is cooled by air, so it can never freeze up or boil over.

It won't have anything to do with water.

So we saw no reason to name it after a fish.
